PROFESSIONAL SUMMARY

Senior engineer with 9+ years of experience building distributed backend systems and LLM-powered document intelligence platforms. Strong expertise in designing REST APIs, containerized deployments, scalable data pipelines, and AI-driven search systems in cloud-native environments.

EXPERIENCE

Principal Engineer – QuantAxis Analytics

2021 – Present

- Designed resume intelligence platform powered by Azure OpenAI and local LLaMA models
- Built asynchronous backend APIs using FastAPI
- Deployed services using Docker and Kubernetes
- Implemented PostgreSQL schema migrations and Redis caching
- Led migration from monolith to microservices architecture
- Reduced inference latency by 38% through performance optimization

Senior Software Engineer – DataNest Labs

2018 – 2021

- Developed data ingestion pipelines using Python and Spark
- Implemented NLP preprocessing and text normalization workflows
- Designed REST APIs consumed by React dashboards
- Optimized SQL queries and database indexing
- Built semantic search system using embeddings and transformer models

Software Engineer – InfoCrest Technologies

2015 – 2018

- Backend development using Django

- Built internal admin dashboards
- Created automation scripts for data processing
- Maintained relational database systems

PROJECTS

DocMind AI

Enterprise-grade document parsing system using LLMs and semantic search.

TalentMatch Engine

Candidate ranking system using embeddings and cosine similarity matching.

EDUCATION

M.Tech – Artificial Intelligence
BITS Pilani – 2015

B.E – Computer Science
Anna University – 2013
